

THE BEST CORROSION CONTROL PERFORMANCE, GUARANTEED!

Termarust Technologies Product Major Points of Difference

1. Termaqua TA6100 Glassfilled Acrylic Roof Insulation Coating

- Unique in that we use a high ratio of hollow glass with no effect on the elasticity of the coating
- Ideally suited to environments with high temperatures because of its enhanced insulating properties
- Excellent UV reflectance allowing the roofs to reflect the sun's energy
- Glassfill increased the performance over a standard white acrylic by 25-30 % in the coatings ability not to transfer heat to the interior of the structure
- Waterbased technology non toxic solvents

2. Termaqua TA6125 Concrete Preservation Coating

- Same as above
- Designed to coat concrete where long term performance, cosmetics and heat reflectance are an issue
- Maybe pigmented to colors and heat reflect pigments are also available to enhance performance

3. Termaqua TA6200 Flexible Acrylic Crack Filler

- Same as above
- Specifically formulated to fill cracks in concrete up to 2 inches deep and can be poured if required
- Maybe used to do roof repairs before coating with the Termaqua or Termafluoro systems
